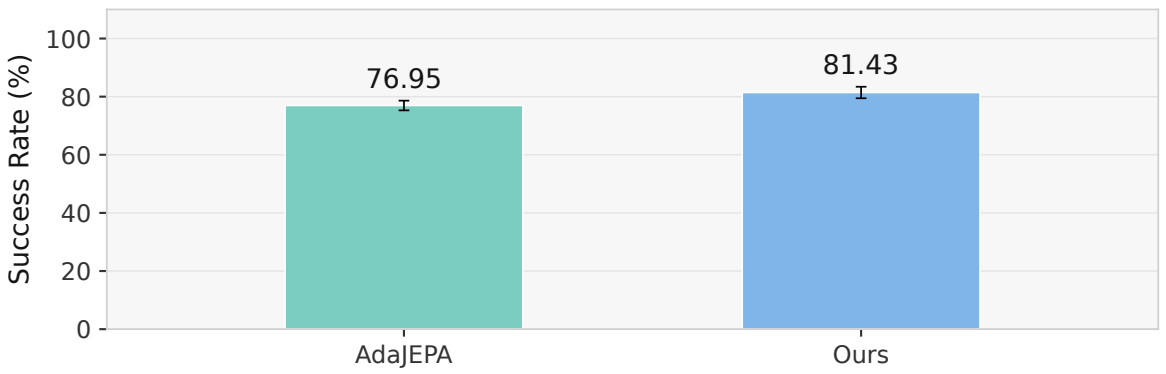
AdaJEPA vs Ours

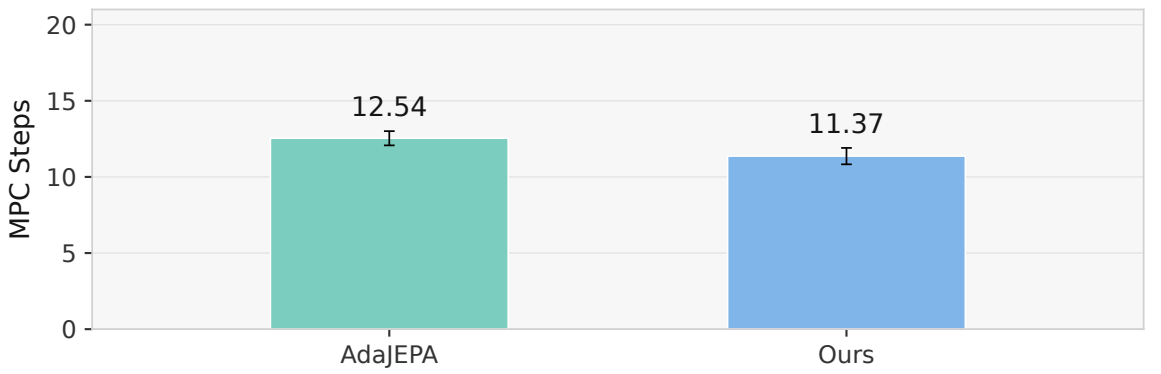
AdaJEPA Ours

Seven shape domains | GD | Same original shape pretrained checkpoint

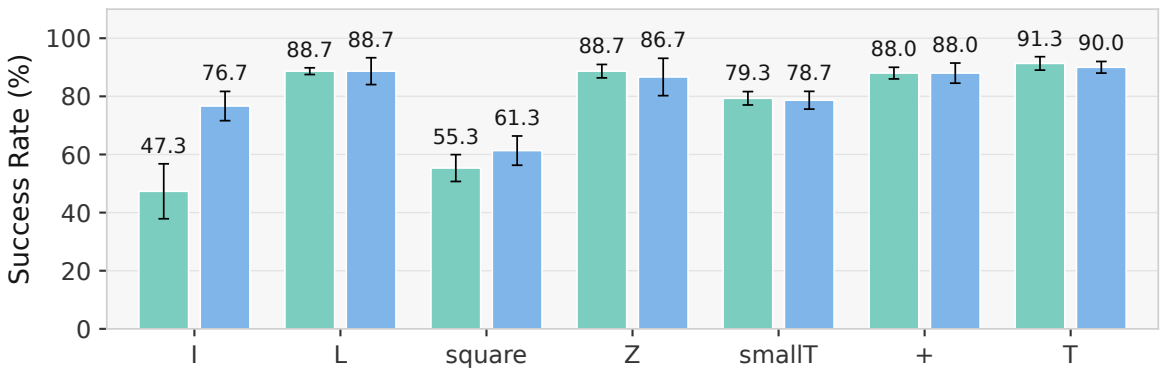
(a) Overall held-out success rate



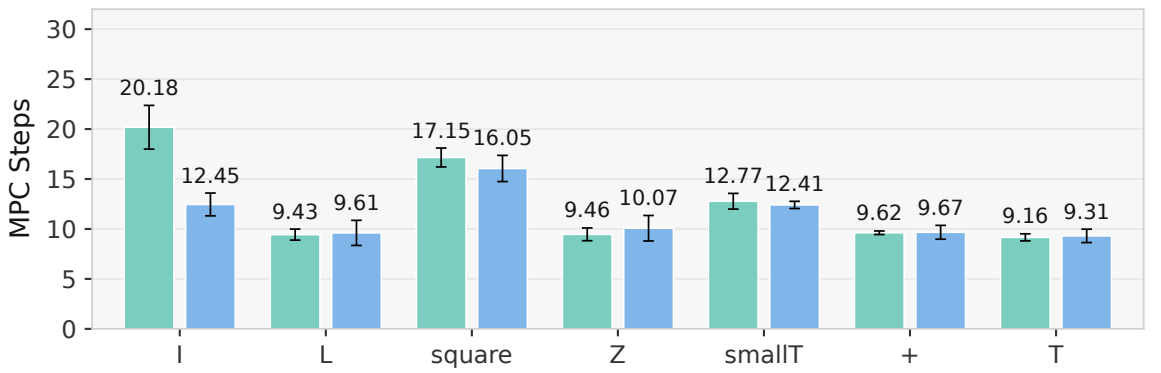
(b) Mean MPC steps (all test episodes)



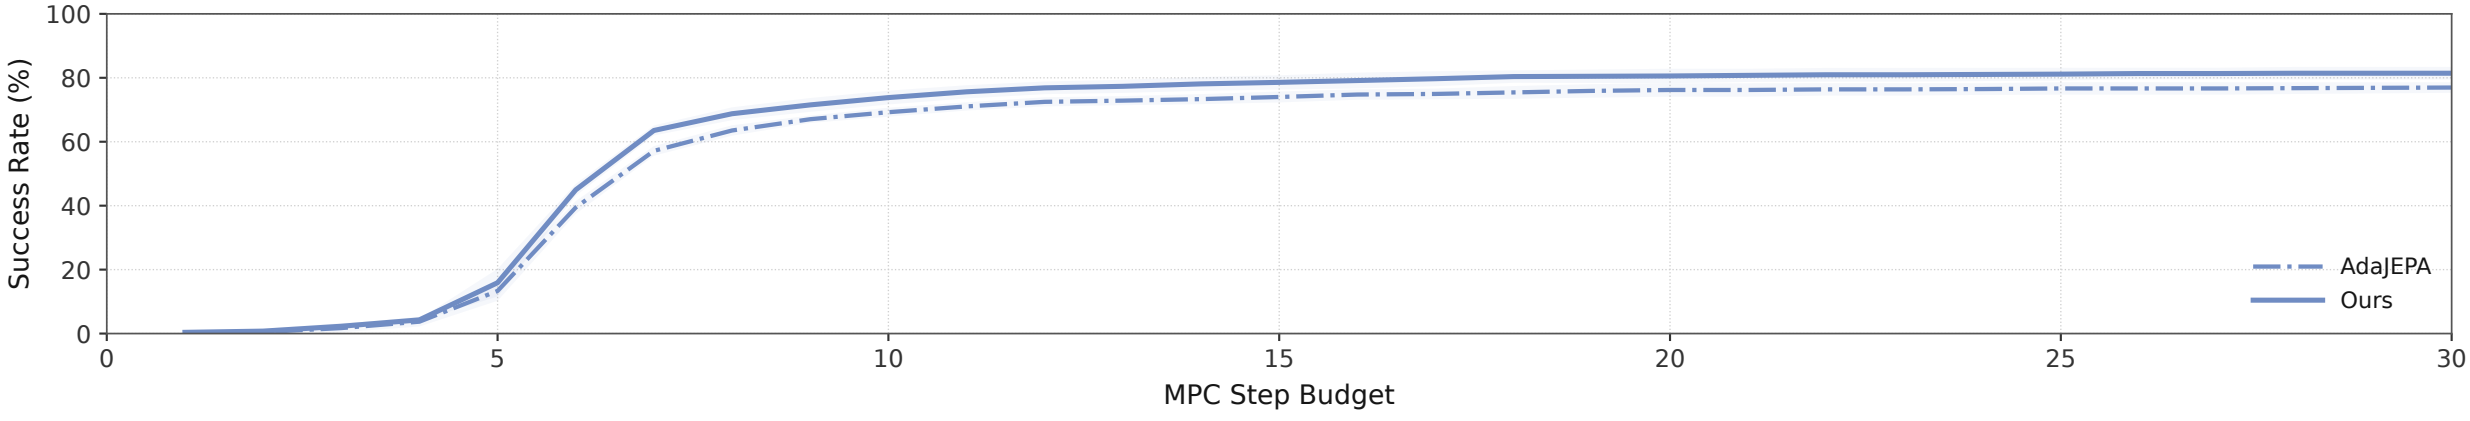
(c) Held-out success by shape



(d) Mean MPC steps by shape



(e) Held-out success within MPC budget



Held-out tests: 1,050 episodes per method, 150 per shape; round-5 endpoints, one learning chain.

Error bars and budget shading: +/- 1 SD across three test seeds, not training repeats. Failures count as 30 MPC steps.

AdaJEPA resets to the same pretrained checkpoint each episode. No comparable five-round learning log is available.
